

Liberty Series: WebSphere Liberty Profile Deployment Topologies

Session AAI-1526

Erin Schnabel, Liberty Profile Development Lead, IBM
Chris Vignola, WebSphere Systems Management Architect, IBM

Please Note

IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal without notice at IBM's sole discretion.

Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision.

The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract. The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

This is a story about Judy...

Judy

Judy has an idea...

Judy

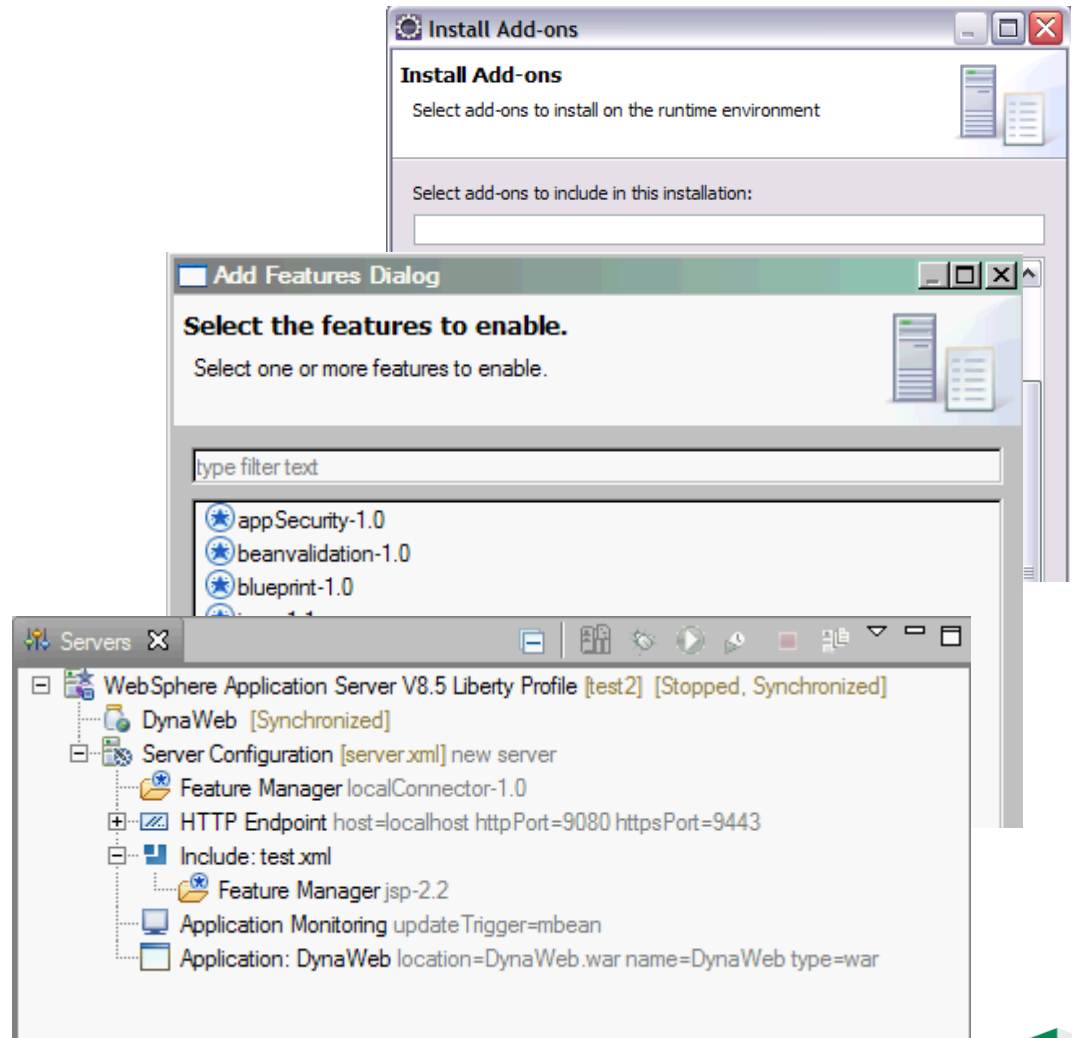

... for the next killer application.

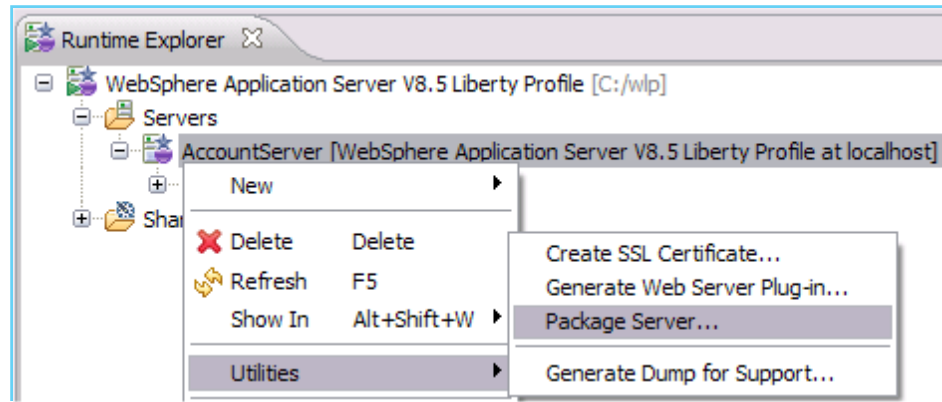

Judy uses WDT and Liberty to prototype her idea...

Judy

... and uses a package to share it with her team.

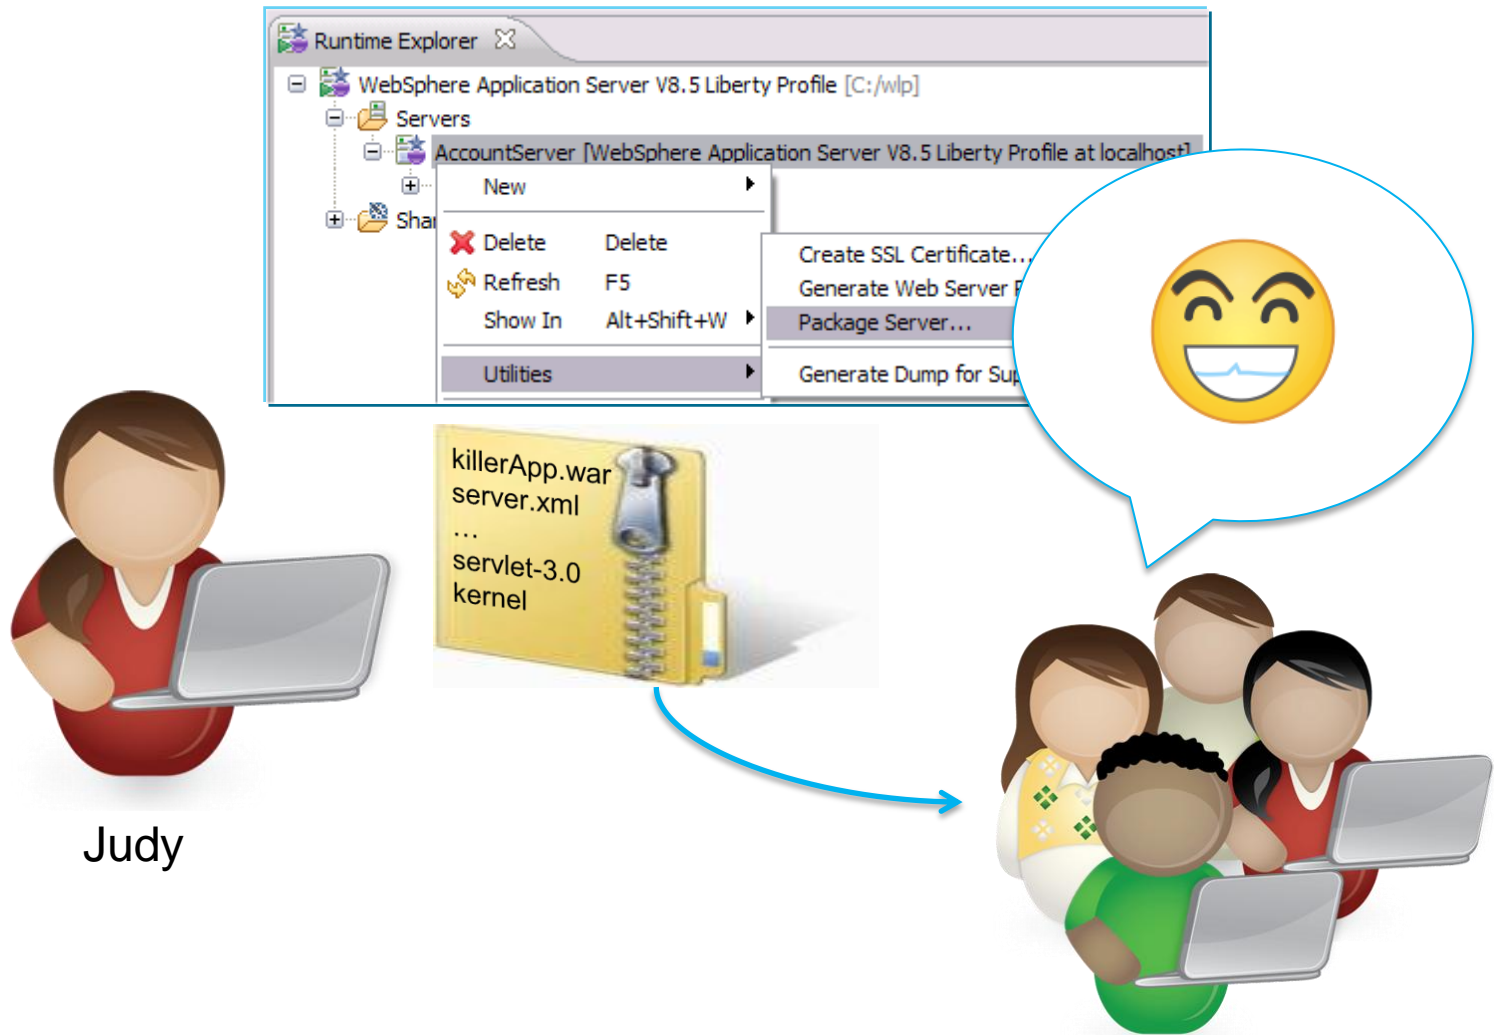

Judy

server package testServer ...

They love it!

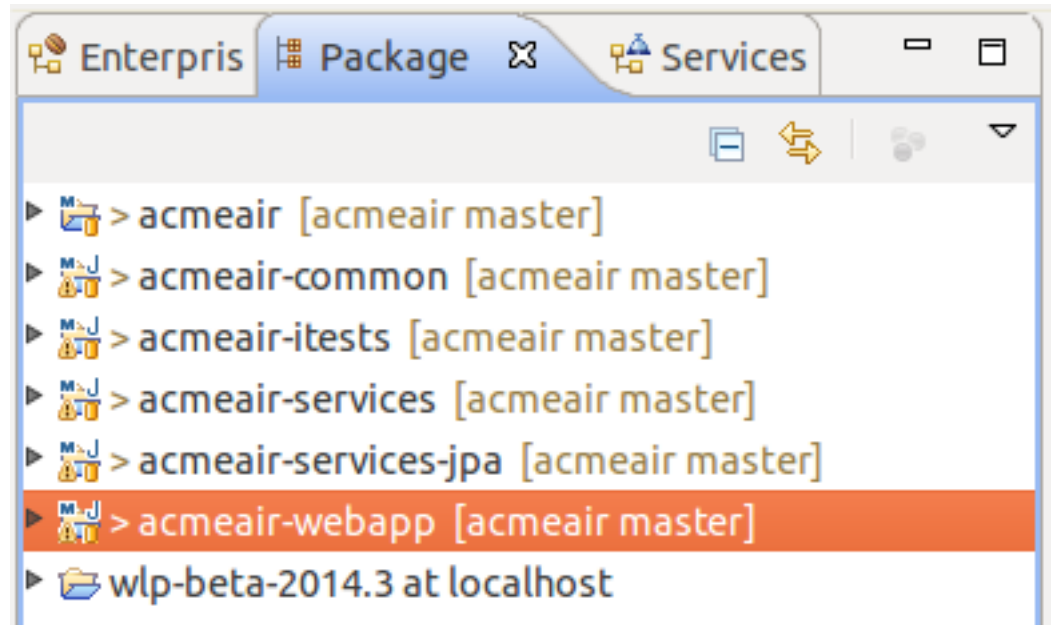

Judy checks in the app and server configuration...

- ▶ Variables are used to account for machine differences

Judy

server.xml:

```
<httpEndpoint id="defaultHttpEndpoint"  
              httpPort="${wlp.http.port}" />
```

bootstrap.properties:

```
wlp.http.port=9081
```

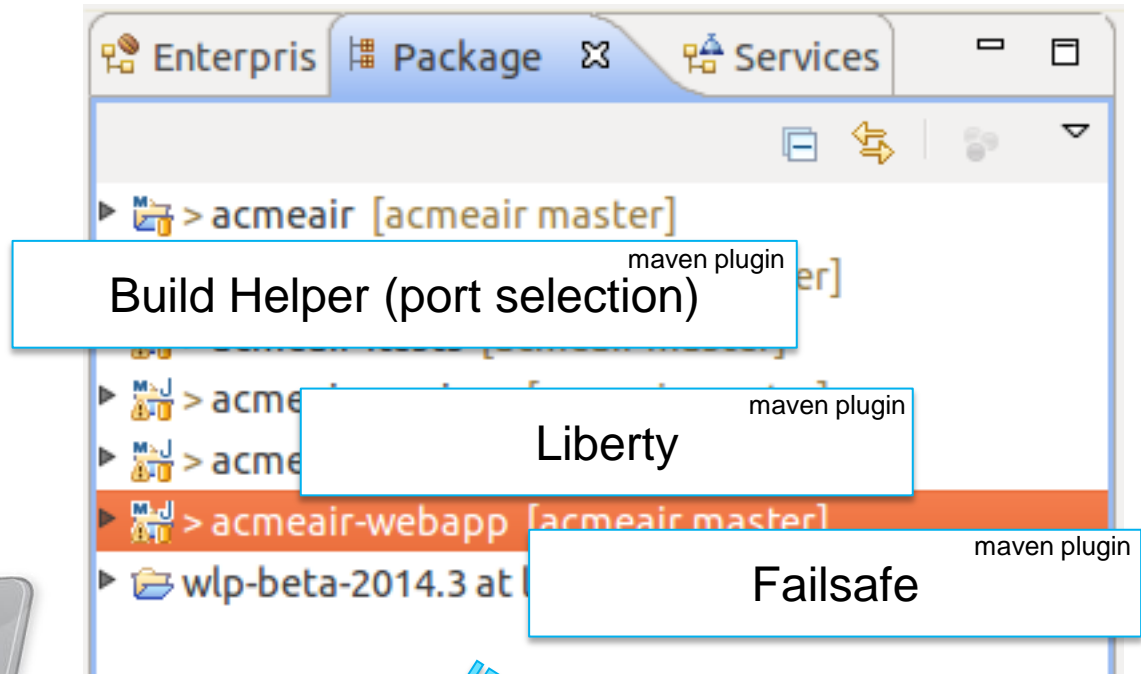

... and uses maven and Jenkins for continuous integration

- Maven plugins populate variables and control the server for testing

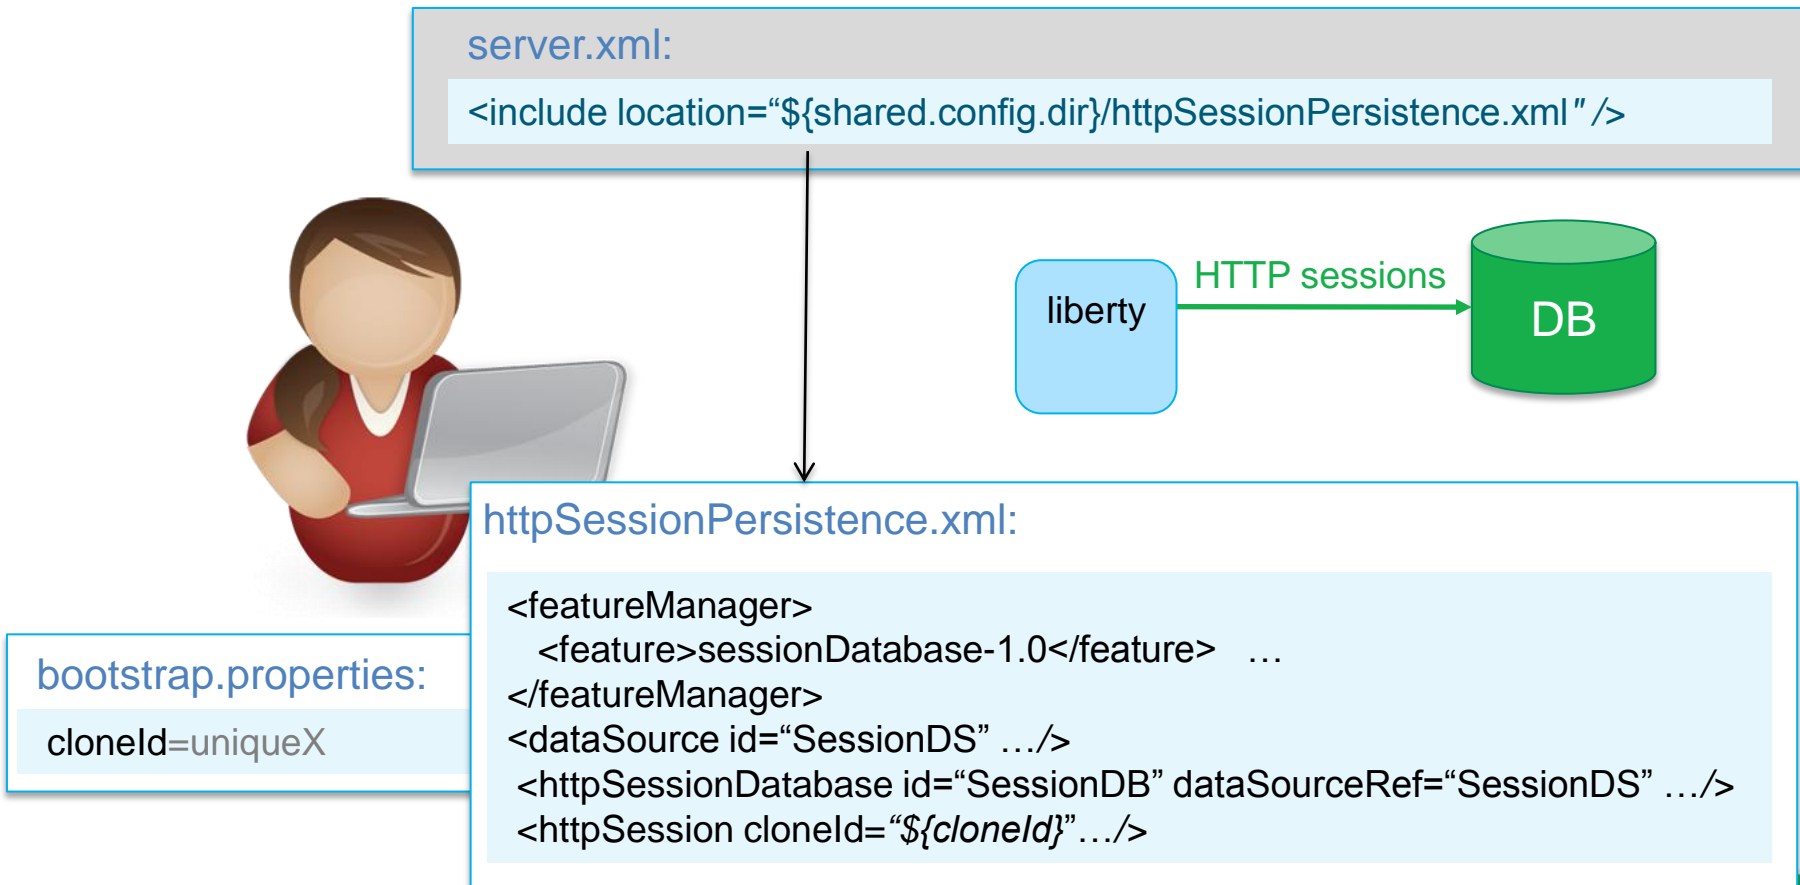

Judy

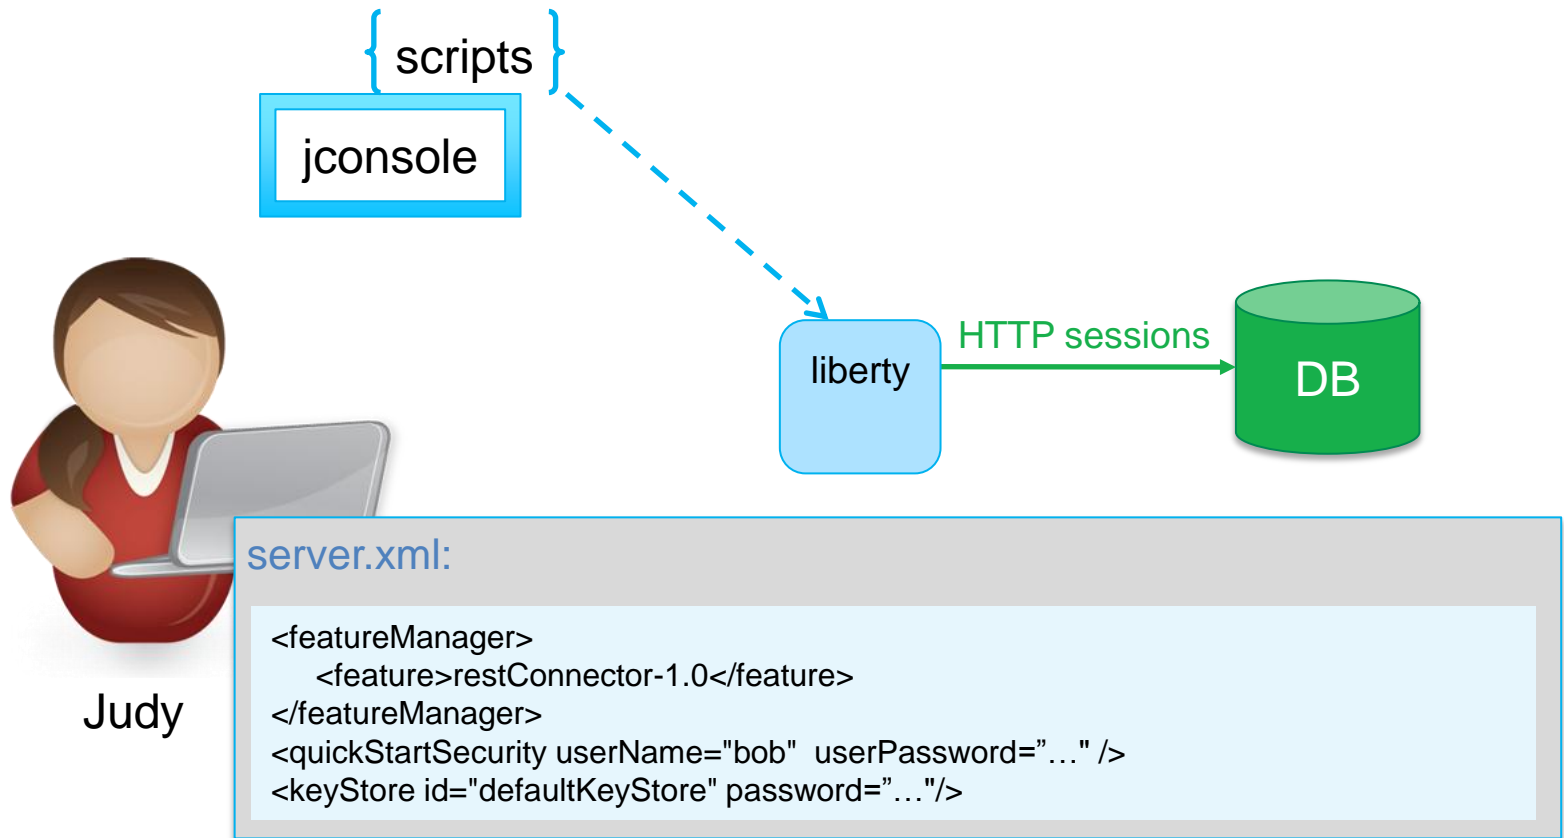

Time for a pilot! Better get ready ...

- ▶ Add HTTP Session persistence
 - Start with a simple database backend

Time for a pilot! Better get ready ...

- ▶ Add the REST connector feature to allow JMX management

Use Chef to deploy a few instances...

- Use tested server instance, package with minify:
server package --include=minify ...

```
knife cookbook create acmeair  
knife cookbook upload acmeair  
  
knife node edit ...
```

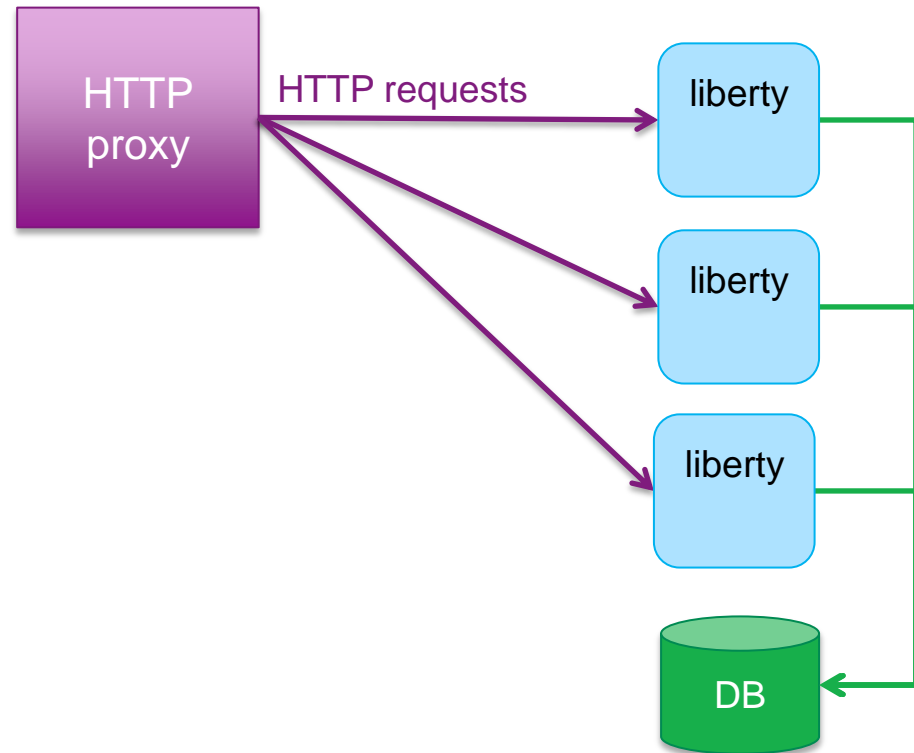

... and then set up a load-balancing proxy

- ▶ Use a load-balancing proxy (like IHS and the WAS IHS plugin) to spray HTTP requests across several servers

Judy

Isolate the externally accessible apps

- Configure Virtual Hosts to isolate the application from other (internal/administrative) traffic.

server.xml:

```
<httpEndpoint id="appEndpoint"
  host="*"
  httpPort="${app.http.port}"
  httpsPort="${app.https.port}" />

<virtualHost id="default_host">
  <allowFromEndpoint>defaultHttpEndpoint</allowFromEndpoint>
</virtualHost>

<virtualHost id="applicationHost">
  <hostAlias>*:${app.http.port}</hostAlias>
  <hostAlias>*:${app.https.port}</hostAlias>
  <allowFromEndpoint>appEndpoint</allowFromEndpoint>
</virtualHost>

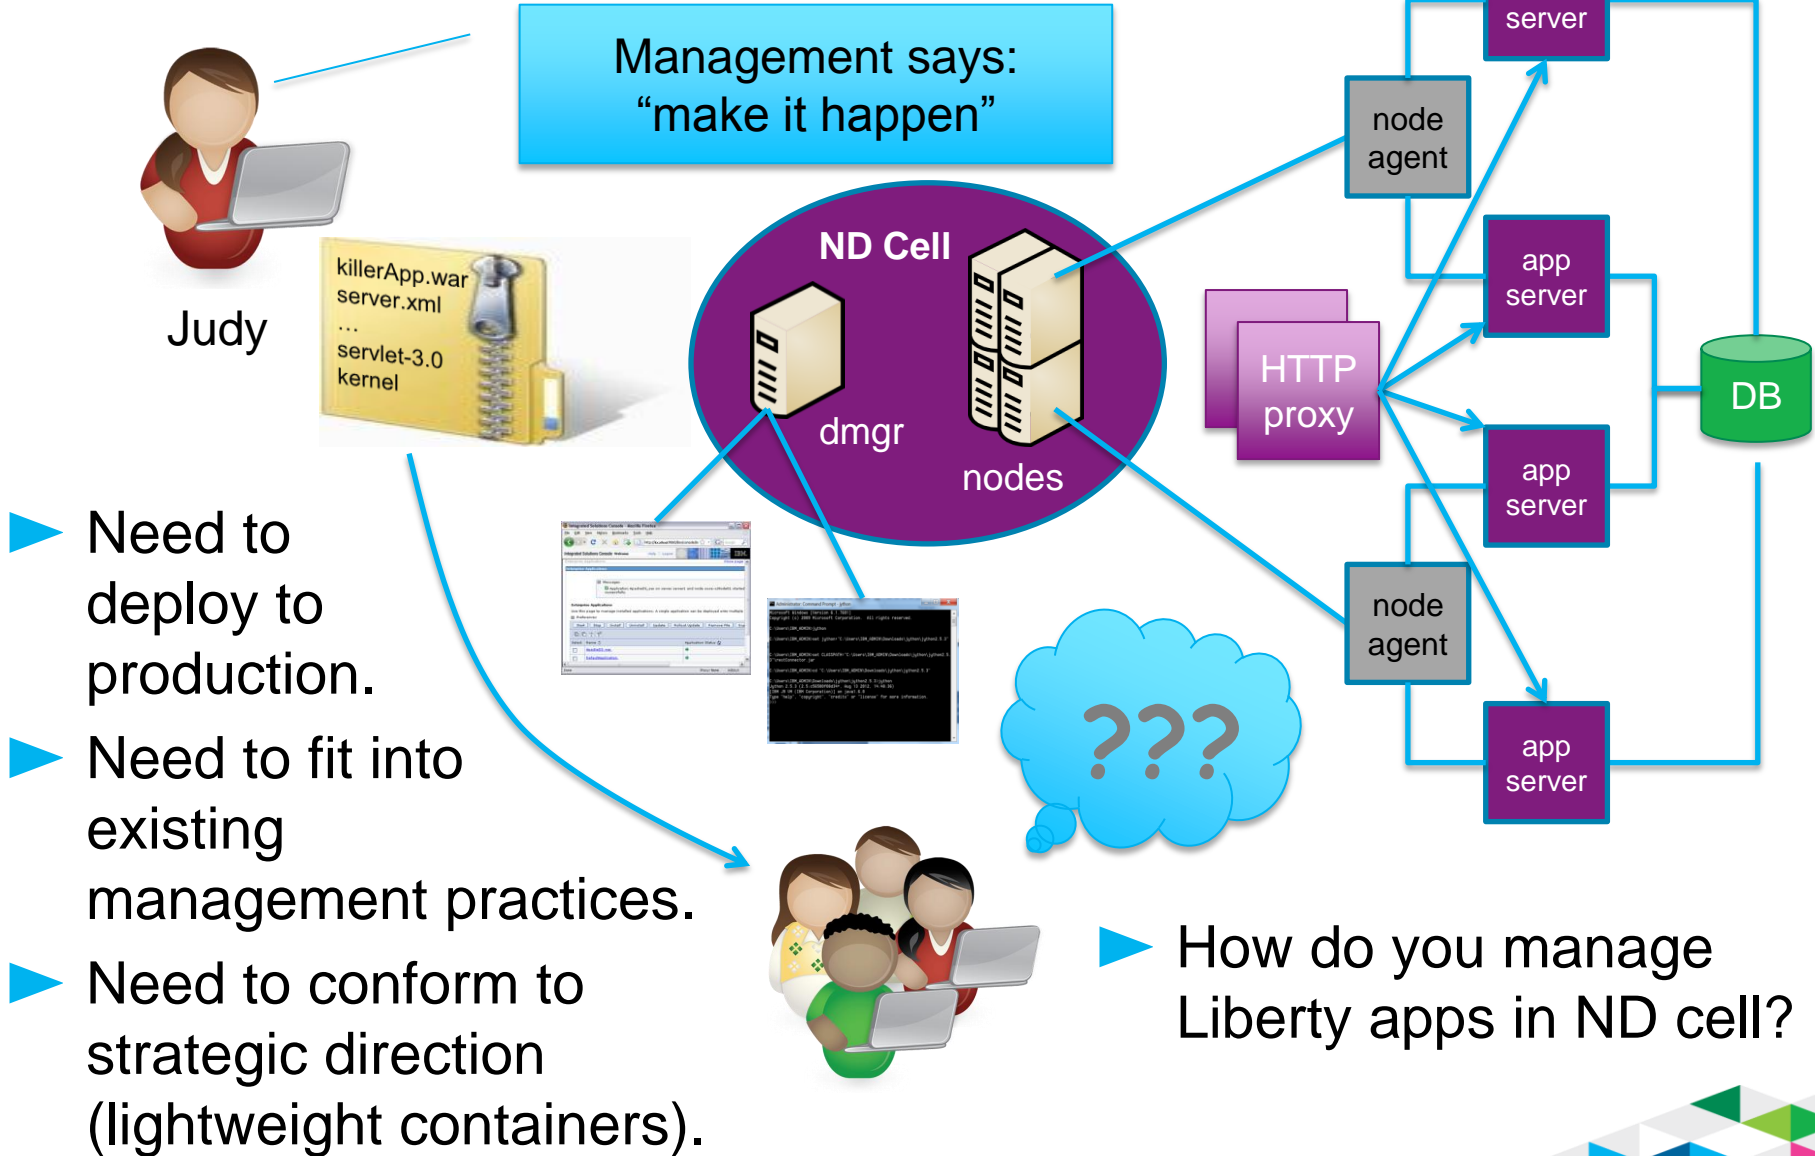

<pluginConfiguration httpEndpointRef="appEndpoint" />
```

ibm-web-bnd.xml

```
<virtual-host name="applicationHost" />
```

Pilot is a big success! Production next ...

Managing Liberty Apps in ND Cell – 2 Options

▶ Cross-deploy apps to from Liberty to Full Profile

- One-way programming model fidelity
- 100% operational consistency

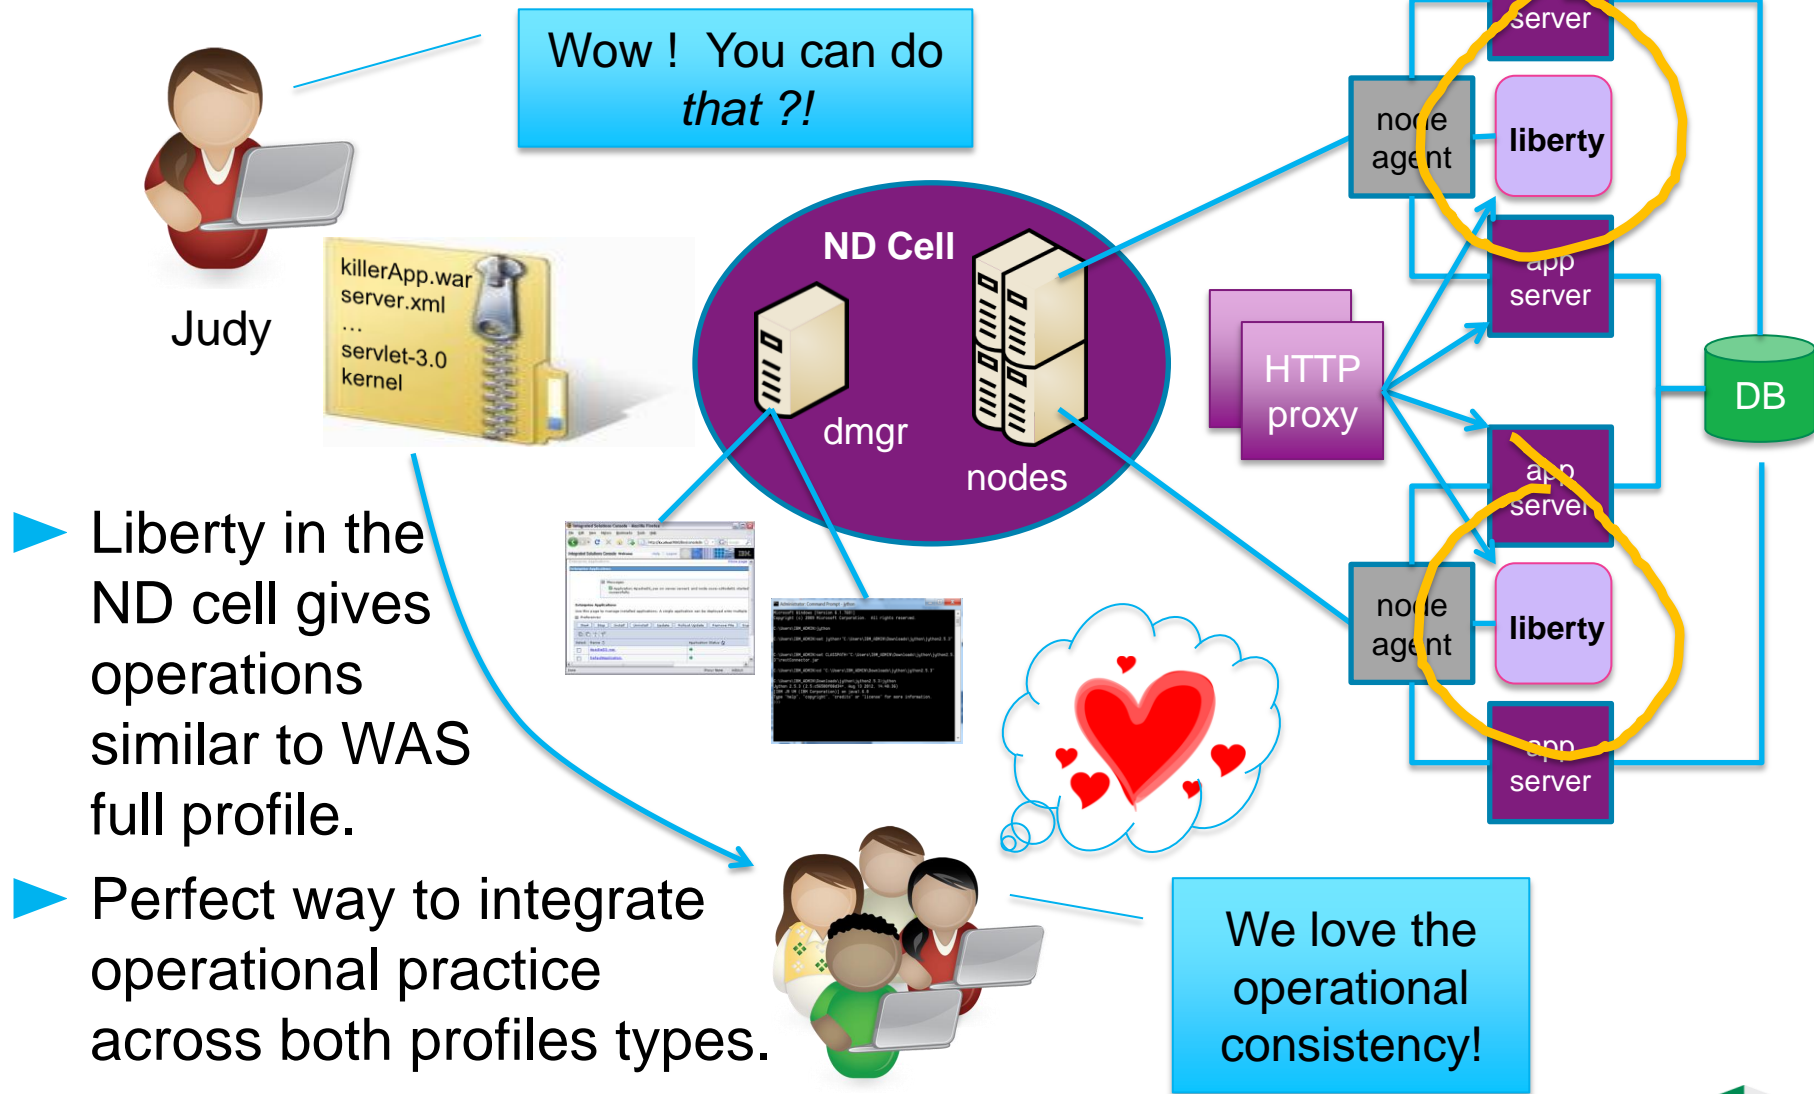

Judy

▶ Manage Liberty profiles as integral part of ND Cell !

- Built on Intelligent Management Middleware Server support
 - Available v8.5.5.1
- Basic console/scripting access to Liberty
 - config access (i.e. server.xml)
 - lifecycle (start/stop/status)
 - log access (messages.log, etc)
- Optional dynamic clusters for Liberty
- This is “Liberty Assisted Lifecycle” support

Liberty Assisted Lifecycle Support ...

Judy's application is wildly popular!

Her organization plans for growth ...

Judy

We need a
Massive-scale
solution for Liberty
management.

We need a
Liberty
Collective!

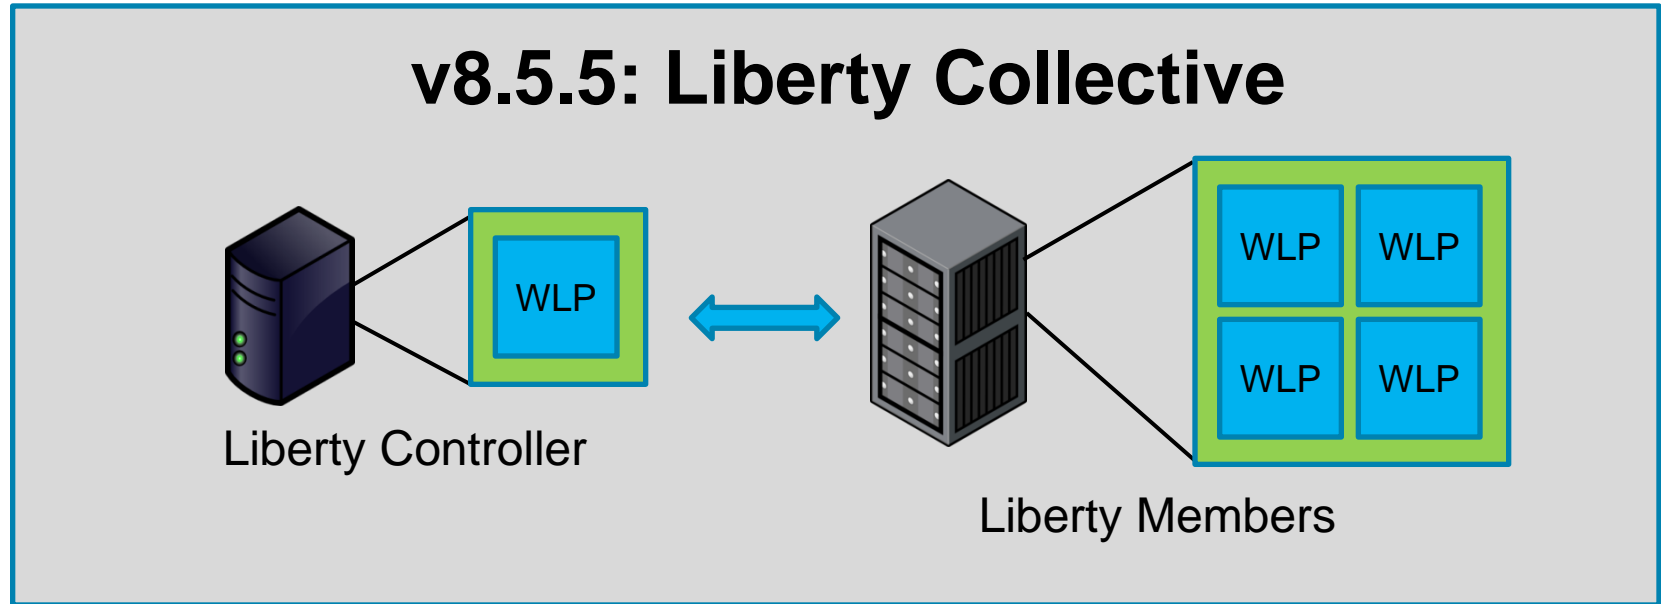

Judy

Liberty Collective Primer

Liberty Collective: Next Generation Management

WLP=WebSphere Liberty Profile

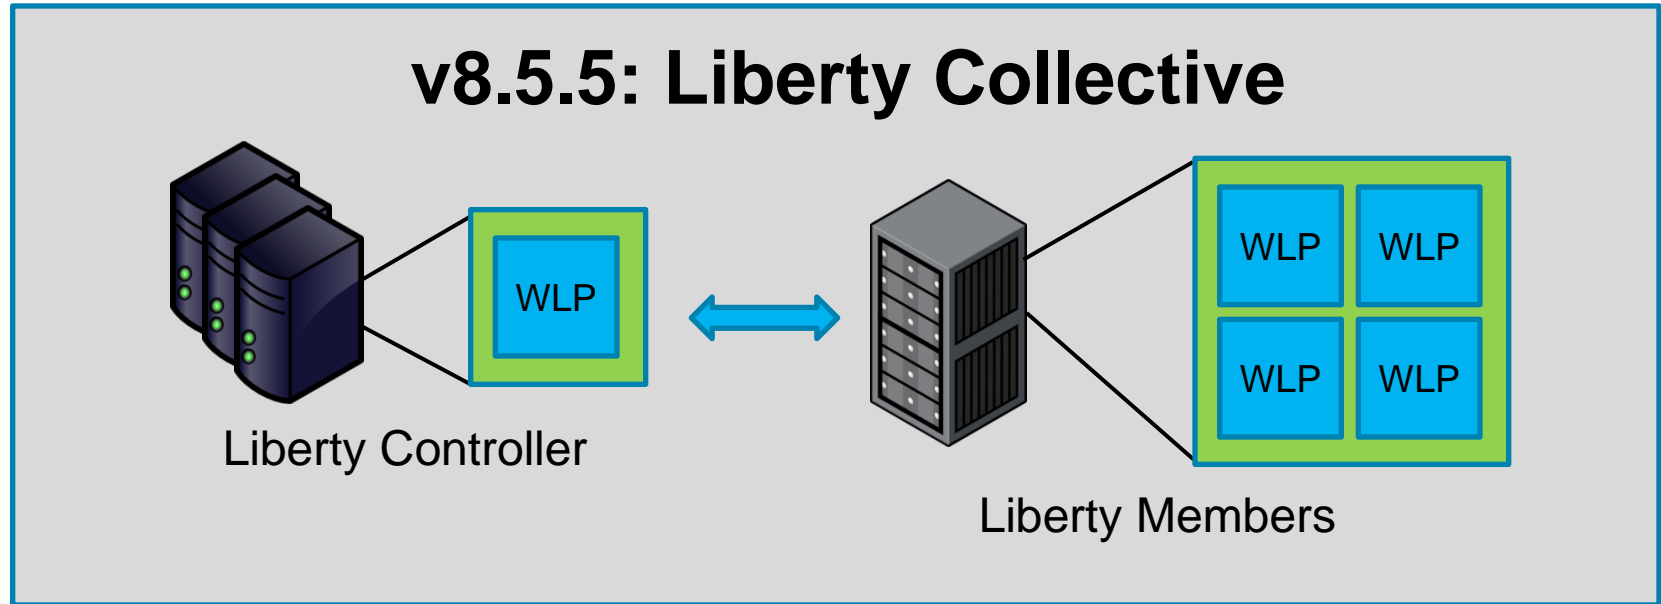

- ▶ Liberty Collective: **NEW** multi-server administrative domain architected exclusively for Liberty!

Liberty Collective: Next Generation Management ...

WLP=WebSphere Liberty Profile

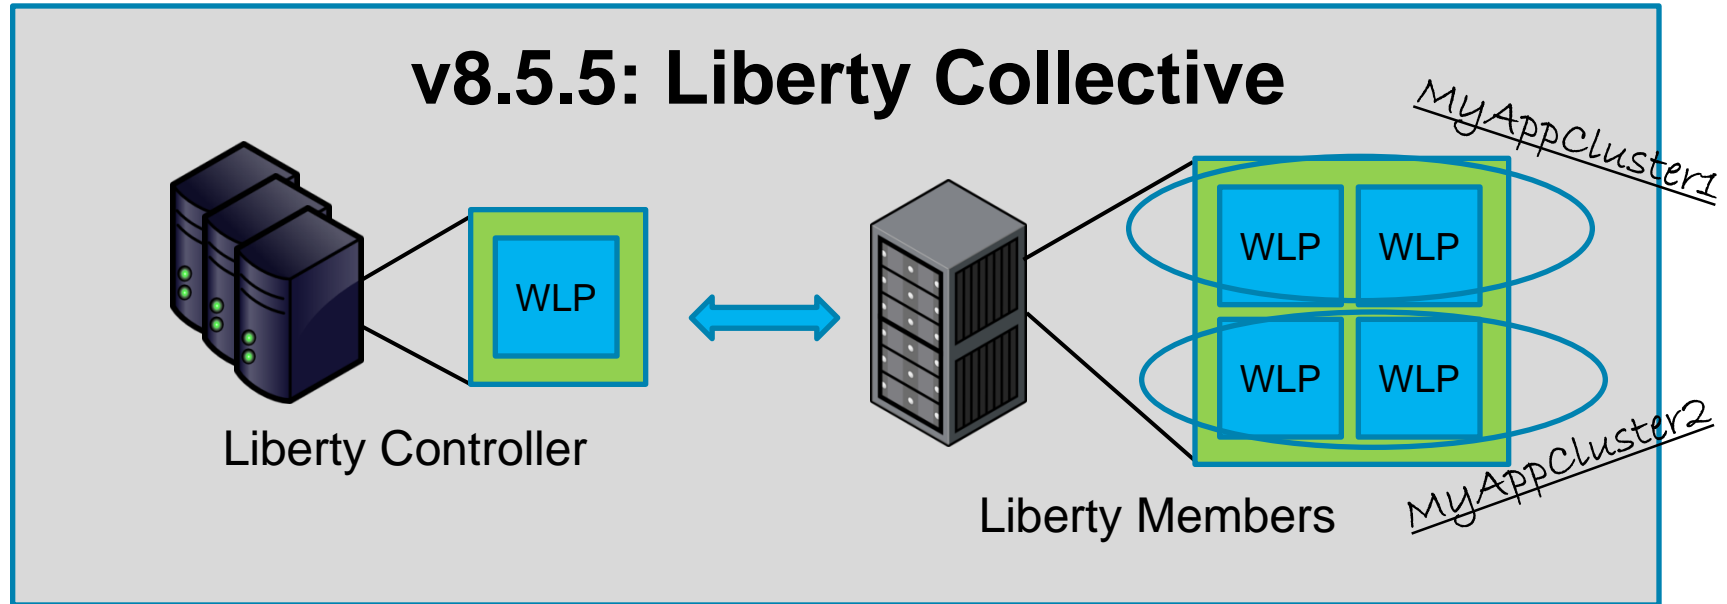

- ▶ Liberty Collective: **NEW** multi-server administrative domain architected exclusively for Liberty!
- ▶ Liberty Controller: **NEW** scalable admin server built on Liberty.

Liberty Collective: Next Generation Management ...

WLP=WebSphere Liberty Profile

- ▶ Liberty Collective: **NEW** multi-server administrative domain architected exclusively for Liberty!
- ▶ Liberty Controller: **NEW** scalable admin server built on Liberty.
- ▶ Liberty Clusters: **NEW** support for Liberty cluster management.

Principles of Liberty Collective

▶ **Standards-based admin API**

- Built on JMX (MBeans).
- Works with common tools (Jconsole, Jython, etc).

▶ **Loosely-coupled**

- Exploits Liberty composable server model.
- App servers can easily and quickly be moved in and out of collective.

▶ **Distributed Cache Model**

- Admin server (controller) is config/state cache.
- Doubles as bi-directional JMX proxy.

▶ **Distributed Configuration**

- App Server owns its own config.
- App Servers cache sparse config and state in controller.

▶ **Scalable, Resilient Admin Domain**

- Highly Available admin server (replica model)
- Agentless

Capabilities Comparison

 = cell advantage

 = collective advantage

Capability	Liberty ND Cell	Liberty Collective
Lightweight	No	Yes
Setup speed	Low	High
Memory use	High	Low
Reconfigurability	Low	High
Domain Scalability	Low	High
Admin Scalability	Low	High
Liberty deploy	No	Yes
Admin HA	Yes	Yes
Static clusters	Yes	Yes
Health Manager	Yes	No (for now)
Dynamic clusters	Yes	No (for now)
Extends existing env	Yes	No

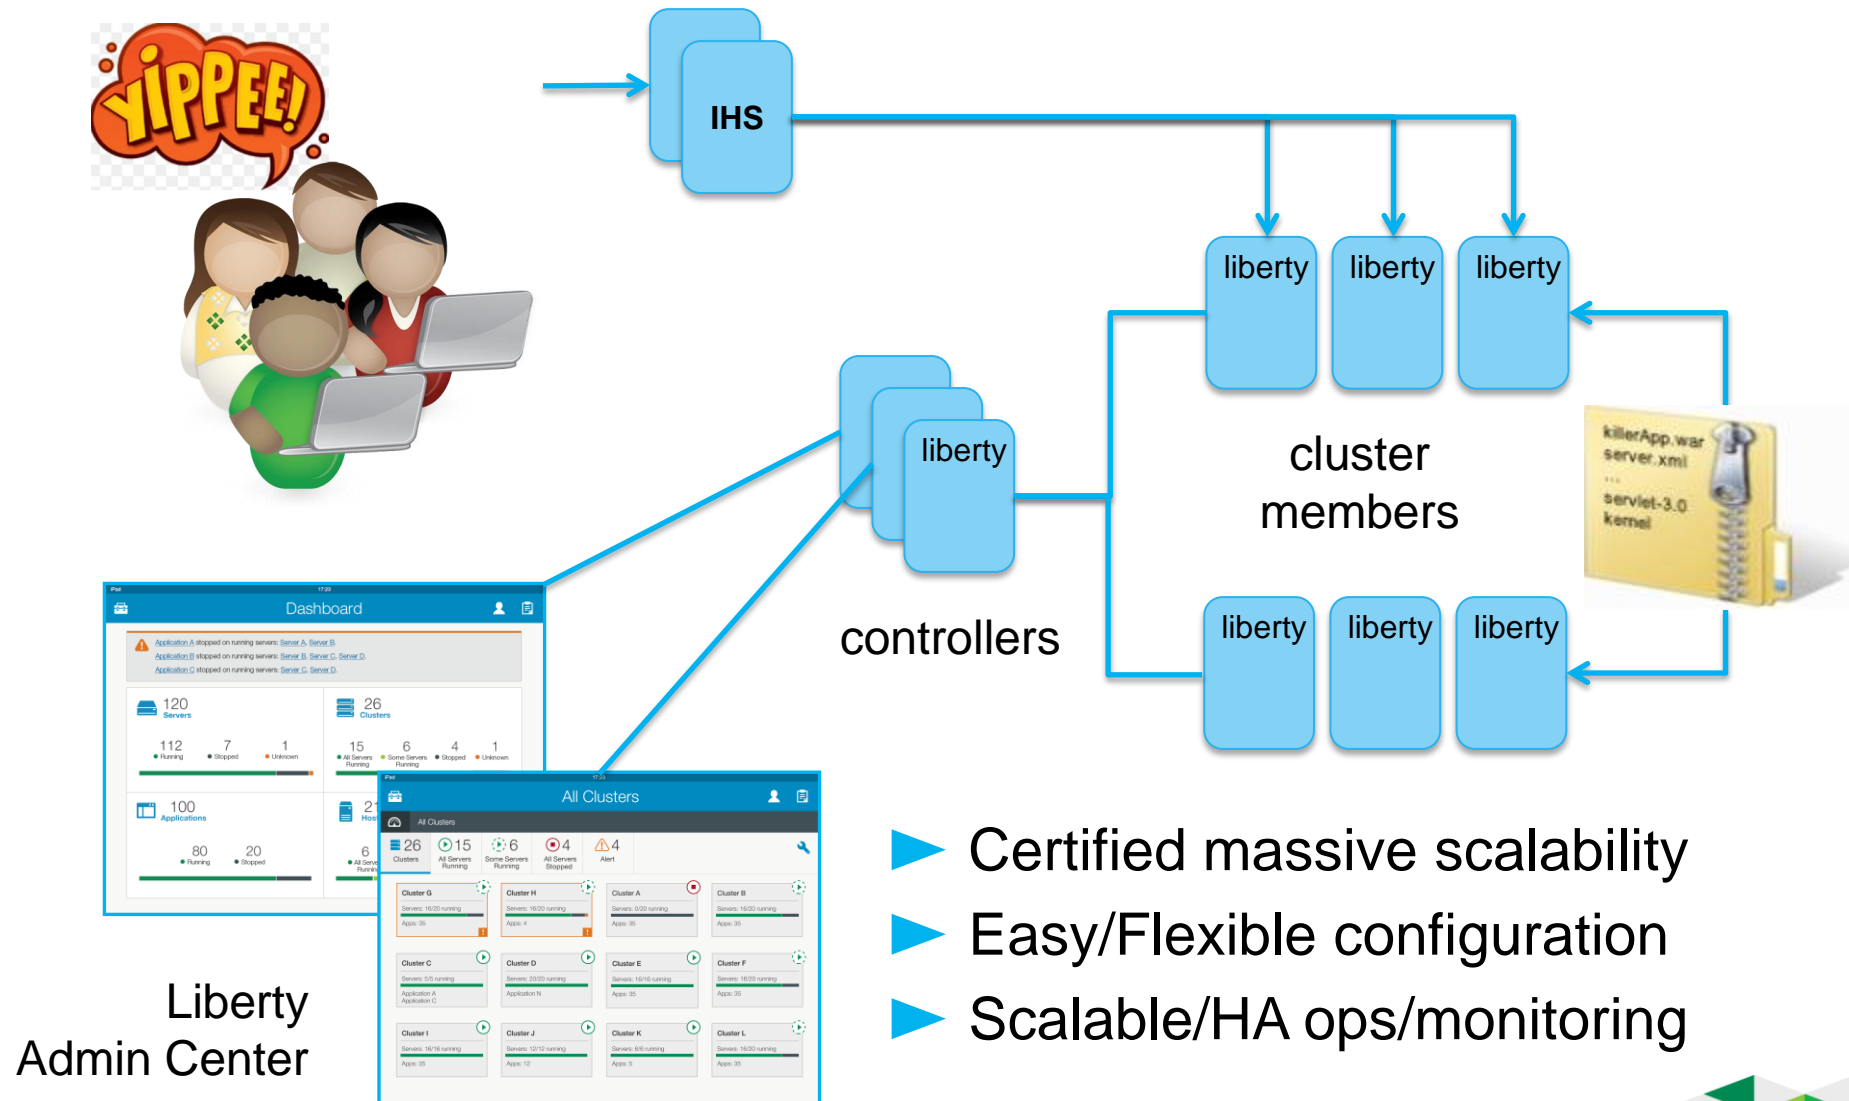

Judy

Now back to our story ...

So the Infrastructure Team sets up a Liberty Collective!

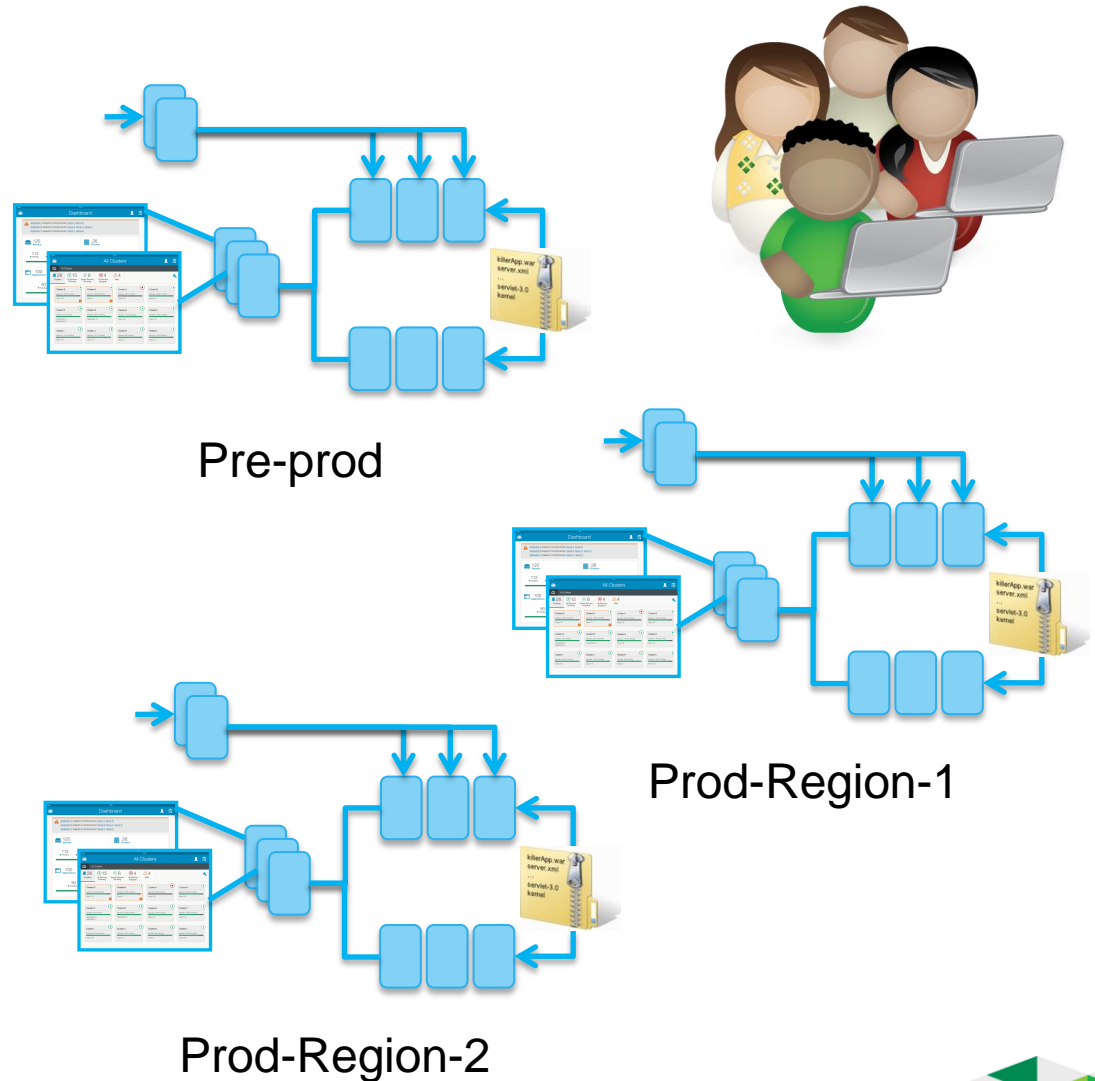

- ▶ Certified massive scalability
- ▶ Easy/Flexible configuration
- ▶ Scalable/HA ops/monitoring

... and several others! There are considerations...

- ▶ How to integrate development and production?
- ▶ How to manage deployments across multiple environments?
- ▶ How to automate creation of new environments?

So Infrastructure Team weighs deployment options ...

- ▶ Widely adopted open source deployment automation.

IBM SCP/SCO

- ▶ IBM SmartCloud® Pattern-powered on-premise cloud.

uDeploy

- ▶ Powerful workflow modeling and operational control for deployment automation.

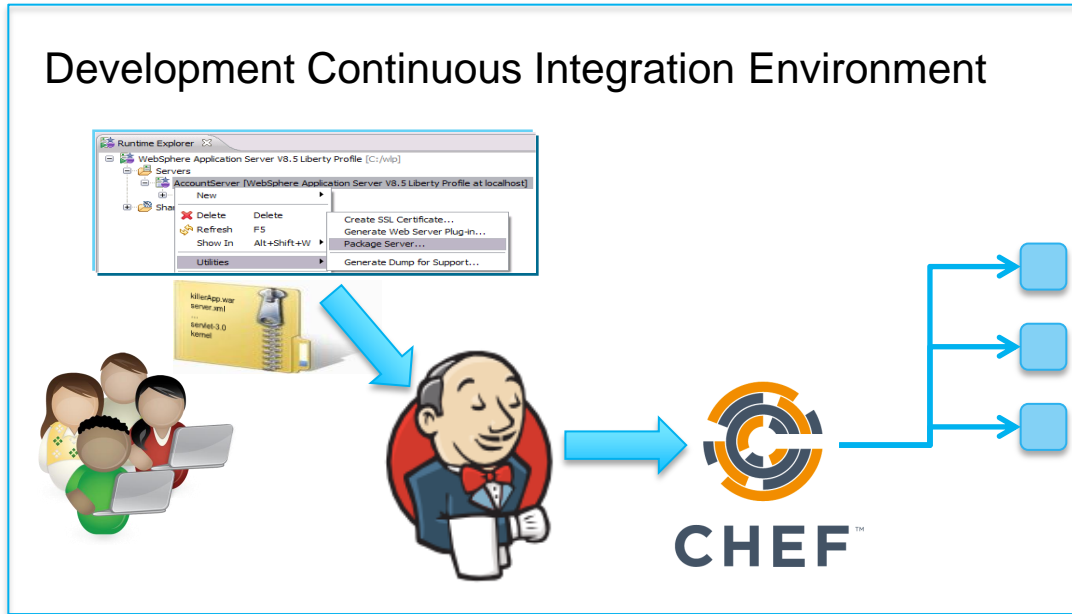

Key Factors for Judy's Organization

- ▶ Mix of on-premise and off-premise compute resources.
- ▶ Growing business requires rapid build out of new environments.
- ▶ Need strong IaaS cloud partner.
- ▶ Strong desire to integrate continuous build and production deployment.
- ▶ Time to market demands careful reuse of existing practices.

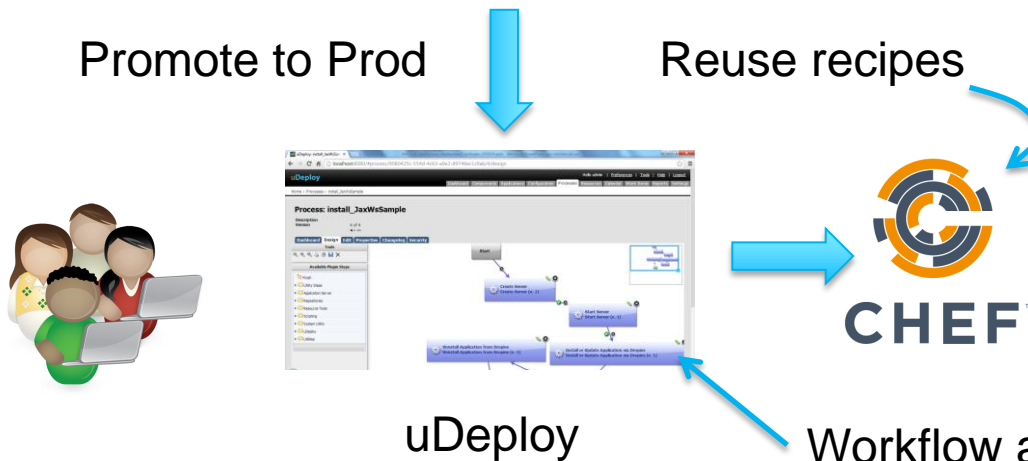

Their New Architecture – Ready for Massive Growth!

Development Continuous Integration Environment

Prod-Region-2

Judy's Application Becomes a World-wide Sensation!

With data centers around the globe!

And where's Judy?

Judy

Enjoying the Spoils of Victory!
